

EASILY ACCESS AND SHARE
INFORMATION WITH THE LOW-COST
NETWORK SOLUTION BUILT FOR
SMALL BUSINESS.

Get access to the information your business needs to succeed.

Imagine what your business could achieve if you could access company information and resources while away from the office. What if your employees could more easily find and share information? With the right technology in place, you can be more productive, feel confident your business information is safeguarded, and better connect with your customers. Our small business solutions feature the Microsoft® Windows® Small Business Server 2003 to help you:

Get more done with less.

Stay connected to customers.

Keep your business up and running and data protected.

Above all, get a reliable foundation to build your business on.

Get more from your technology investment.

The free guide, *What the Right Computer Network Can Do for Your Business*, provides a great preview of how you can get more out of your server investment. You'll also learn how the right server can help you:

Improve your ability to access information, in the office and on the road.

Quickly and easily share files as well as printers and other devices.

Enhance the security and reliability of your data.

Microsoft Windows Small Business Server 2003 is designed for small business as a cost-effective network solution that helps you improve customer connections and business efficiency, while keeping your systems online.

With Windows Small Business Server 2003, you'll enjoy significant benefits and improved capabilities including: Remote access to business information and resources from any Internet-enabled PC.

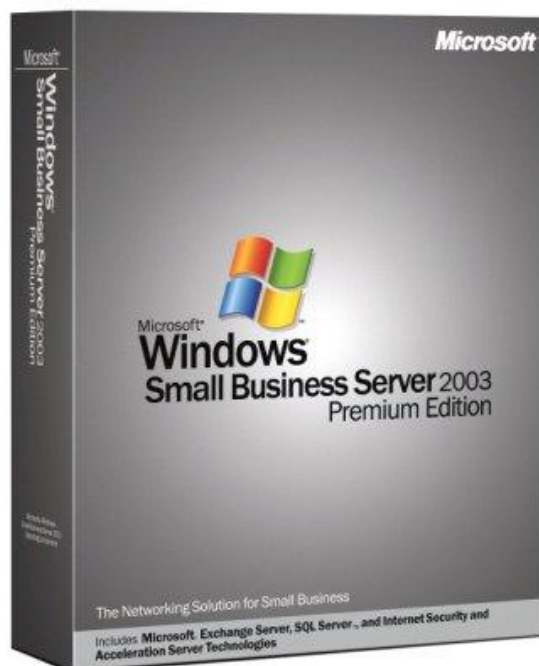

An internal company Web site to help employees save, find, share, and access business information in one central location, and collaborate on group projects.

Improved remote access with a remote Web workplace.

The ability to automatically back up business information and easily retrieve accidentally deleted files and/or previous versions.

Easier setup and management to get up and running quickly and easily.

Improved security and overall better performance.

IKnowNet has been working with Windows Vista since the inception of the beta program. We are dedicated to helping our clients keep up with the technology driving today's and tomorrow's networks.

We are ready for your deployment!
